What is StickForStats?

The first statistical analysis platform with built-in Guardian protection that prevents Type I errors before they happen. Trusted by researchers who value scientific integrity over p-hacking.

Why do we need proper statistics?

- Mars Climate Orbiter (1999)
A metric-imperial unit conversion failure in navigation data caused thrust miscalculations and mission loss.
Impact: Complete loss of the \$327.6M NASA spacecraft due to preventable analytical error.
- Reinhart-Rogoff Excel Error (2010)
An Excel range-selection mistake excluded key countries from the analysis, producing incorrect GDP-growth conclusions that shaped international austerity policies.
Impact: Faulty statistical analysis influenced global economic decisions affecting millions.
- Theranos Blood Testing Scandal (2018)
Assays were validated improperly, quality-control data were manipulated, and test accuracy was overstated, leading to high false-positive and false-negative rates.
Impact: Unsafe clinical decisions and \$945M investor fraud, with patients directly harmed by unreliable results.

Success Stories from Beta Users:

PhD Student, Molecular Biology
“Reduced my analysis time from 2 weeks to 2 days. Finally understood why my PI keeps asking about power analysis!”

Professor,
“My students’ comprehension improved significantly after using the interactive simulations.”

StickForStats: Publish Research with Confidence
